

It's Not About Saving **Energy**— It's About Saving Money

Helio Energy Solutions will increase your bottom line

Helio Energy Solutions consults with clients, advising them about what they need to do to reduce energy costs through Intelligent Monitoring and our proprietary PowerAdvisor.™

You can't save what you don't measure. Our monitoring system focuses on understanding and making energy decisions based on COST.

The system is extensible and scalable, enabling the user to add monitoring points for more detailed load profiling.

The system is expandable and supports a wide range of cost reduction strategies, including:

- Demand response programs
- Energy reduction projects based on cost (instead of just energy reduction)

- Load characteristics analysis to improve energy efficiency
- Analysis of peak load periods to ensure distributed generation projects (solar, wind, etc.) are operating at peak production
- Support for production metrics through benchmarking

Call today to reduce your operating expenses.
